It is shown that any physical object is infinitely divided. A simple tool for analyzing infinity is proposed, from which the absence of the emptiness and the presence of flows constituting the T.N. Solid bodies. These streams do not simply flow, but, like blood or cytoplasm, a permanent, visible fixed level is reproduced. Hence that Solid bodies are individual organisms (crystals) or their community (stones).

The basic properties of life, which received the most vivid expression in the life of organic, such as the presence of accidents in counterweight to the hard determinism (which is freedom); subjectivity; The ability of the concentration of energy opposing its scattering, due to which the animals get more energy from food than spending on splitting.

See the article "Fundament" in the section "Physics" and the book "Relative physics, or physics of elementary concepts"
